Burpee's Spring Flowering Bulbs FOR PLANTING THIS FALL

TULIPS, Hyacinths, Daffodils, Crocus—none more easily grown from bulbs than these and the many others offered in this book. And when we consider how easily they are grown, and how welcome are their gay colors and varied forms at a time of the year when flowers are scarce, it is no wonder that more and more bulbs are planted each fall for spring and winter blooming. We offer an extra select assortment.

Holland, for centuries, has enjoyed a world-wide reputation for the unsurpassed excellence of the bulbs it produces and it is in Holland that practically all of our bulbs are grown.

Brief planting directions are given in this book; full cultural instructions are printed on the bags containing the bulbs. Please send a check or money order with your order; it saves you the C. O. D. fees.

Parrot or Dragon Tulips

The irregularly formed flowers of Parrot Tulips, with their curiously lacinated and attractively fringed petals, are most unusual and come in many rich and varied shades; in some varieties, green markings enhance the beauty of the blooms. Parrot Tulips are entirely distinct, and one of the most interesting plants you can grow; effective in groups in informal borders. Highly prized for cut flowers. May-flowering.

HOW TO GROW TULIPS

Outdoors: Tulips should not be planted in soil in which they had been grown the last two seasons. Select a new location in a sunny position. Do not use fresh manure at planting time; well-rotted manure or bone meal may be worked into the soil which should be well drained. Plant bulbs 5 to 6 in. deep and 6 to 8 in. apart.

Indoors: A mixture of $\frac{2}{3}$ good clean garden soil and $\frac{1}{3}$ leaf mold to which a little bone meal has been added will give the best results. A 6-inch pot will hold about 6 bulbs. Place bulbs about 1 in. apart each way. Cover with an inch of soil and water thoroughly; then put pots in a coldframe or heel-in in the garden for 8 to 10 weeks to force root development. Bring pots indoors, first in a cool location and gradually to the average living room temperature.

Double Early Tulips

The large, full, peony-like flowers of the Double Early Tulips make a most colorful display in beds, borders and in groups or scattered plantings here and there among perennials in April and early May, depending on the season. BONE MEAL

Best Fertilizer for Bulbs

Finely ground bone meal is the only safe fertilizer for bulbs and should be used freely. Apply a liberal application to the soil and mix it in thoroughly before planting the bulbs. Bone meal is slow to disintegrate, therefore long lasting; a wonderful invigorator, produces healthy growth, larger and better flowers. No danger of causing rot or burning.

Giant Ideal Darwin Tulips

Giant Ideal Darwins are superior to many of the older Darwins, the flowers, in most instances, being larger and of better substance, the stems taller and stronger. They usually begin to bloom several days before the regular Darwins and often last for a longer time. The big flowers are truly magnificent, and we can highly recommend them to you for garden decoration and cutting. Many are valuable for growing in pots or bulb-pans.

The Giant Ideal Darwin Tulips offered on this and the next page have been selected from a long list as the most outstanding and best of the group. Every variety has been proved on our Fordhook Farms trial ground and we have no hesitancy in commending them to you. We are sure that when you grow them, you will quickly recognize their superior qualities and will want to add to your plantings each succeeding year.

The chief characteristics of Giant Darwin Tulips are the attractively shaped flowers, tall stems, and lovely colors—scarlet, crimson, rose, pink, violet, purple, slaty blue, blue-violet, lavender, white, golden yellow, etc. They are wonderful for planting in masses in beds, borders or in groups of twelve or more here and there among the hardy perennials, and what could be lovelier for cutting?

If the widest assortment of colors is desired in late tulips, the Giant Darwin, Ideal Darwin, Lily Flowered, Breeder and Cottage varieties should be included in your plantings, as each class has its own range of colors, and all usually bloom during May. The height given for each variety is average and some variation is natural in different localities and seasons. We offer a choice selection of better varieties.

Burpee's New Extra Early Darwin Hybrid Tulips

These two outstanding new tulips are the result of many years' crossing and selection between the big, extra early *Fosteriana* Red Emperor and the best of the Darwins. This new race comes into bloom just after Red Emperor and ten days or two weeks before the Darwins, Cottage and Breeder classes. For the tulip fancier or for exhibition, they are indispensable. Sure to attract attention wherever seen. Truly marvelous.

Flowers are extra large, egg-shaped, 4 in. and more deep, quite fragrant and borne on strong, erect stems. Of the group, we have selected two varieties as the most sensational and which our Holland grower has named in honor of Burpee's famous seed farms—*Floradale* and *Fordhook*.

7591 Floradale Extremely early, long, fragrant crimson blooms shading to scarlet-crimson toward the edges; inside brighter red, sulphur-yellow base and dark blue anthers. A noble tulip of fine form. 26 in.

\$1.75 each; 3 for \$5.00; 6 for \$9.50; 12 for \$18.00

Cottage Tulips

Cottage or May Flowering Tulips are, perhaps, the most permanent of all tulips, blooming in early May, hence the name, "May Flowering." The term "Cottage" is of recent origin, and so called because so many were planted around the country homes and cottages of England. As a class, they are rich in the more delicate and artistic shades of yellow, orange, fawn, salmon, old rose-colors missing to a great extent in other late tulips.

Cottage Tulips are as varied in their range of colorings as the Darwins and are mostly long and oval-shaped; those with gracefully reflexed petals are offered separately as Lily Flowered, page 12. Stems are long and not so stiff as the Darwins or Breeders. Excellent for cutting and unsurpassed for garden use.

Chameleon Tulips

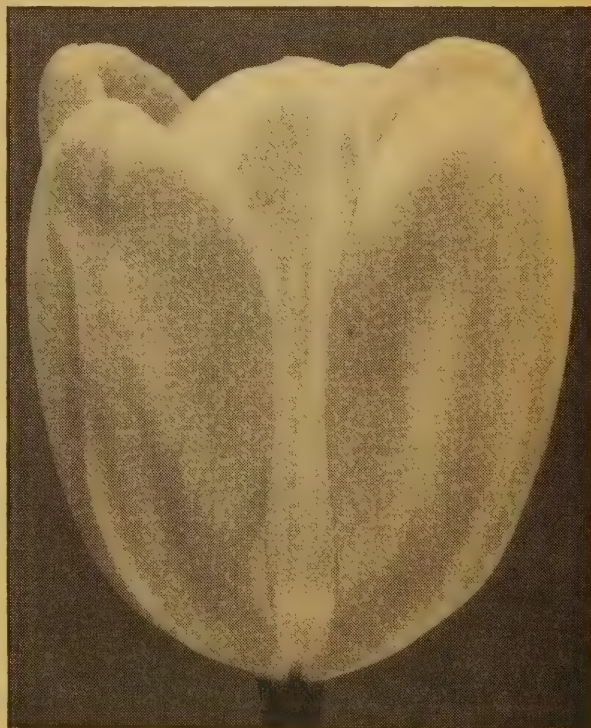

In shape and habit of growth, these resemble the Darwins, but the colorings remind you of the Cottage Tulips. Rather than list them with either class, we are keeping them separate so you will not miss them. When first opening, the flowers are white with faint red or pink markings on edges of petals. As flowers age the pink or red suffuses over entire surface so that the colorings change from day to day, hence the appropriate name "Chameleon." Their ever-changing colorings are a constant delight and create a lovely effect in the garden or as cut flowers. Flower in May outdoors; can be forced for blooming indoors in February.

7558 Fanny Farrar Opens white with rosy shading. When fully developed the flower becomes a bright rosy red. 28 in.
3 for 55¢; 6 for \$1.05; 12 for \$1.85; 100 for \$13.00

3 for 55¢; 6 for \$1.05; 12 for \$1.85; 100 for \$13.00

Chinese Lantern Tulip

7561 Good Gracious This tulip is so distinct that instead of listing it with the Cottage or May Flowering group we are offering it separately so it will not be overlooked. Flowers are of good size, globular and glow with such an iridescent sheen as to create the effect of a delicately colored, lighted Chinese Lantern. The color is rather difficult to describe: a glorious combination of pink, salmon, orange and yellow gives the general effect of brilliant orange; inside is a brighter orange with a contrasting yellow base. Superb for any outdoor planting and valuable for cutting. Interesting. 25 in.
3 for 60¢; 6 for \$1.15; 12 for \$2.20; 100 for \$15.00

Anemone coronaria

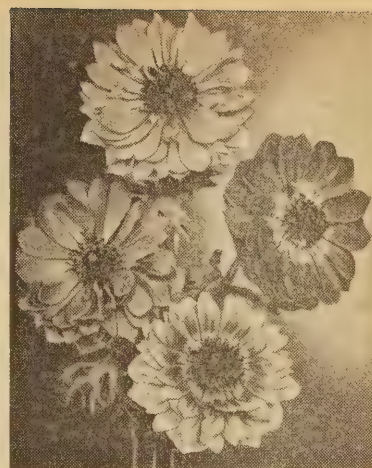

Neat, compact plants with long, stiff-stemmed, showy flowers in many charming colors, such as blue, rose, scarlet, white, etc. Bloom in May and June. Plant bulbs 3 in. deep and 6 in. apart in a cool, moist, but well-drained soil. Require winter protection north of Washington, D. C. In northern states, or in any cold section, we do not advise outdoor fall planting; it is better to wait until spring and treat as annuals or dig and store roots over the winter. In southern states, fall planting is best. Fine for pot culture, borders and rock gardens. Ideal for cutting. 1 ft.

7642 Blue Poppy Lovely, large, single poppy-like flowers in various shades of blue. Attractive in the garden or as cut flowers. Blooms often measure as much as 3 in. across.

Ranunculus

7653 Tecolote® Giants The largest and most magnificent strain ever offered. Giant double and semi-double flowers, 3 in. and more across, are freely borne on strong stems, 12 to 15 in. long. Our mixture contains a wonderful range of colors—yellows, from straw to deep golden yellow; all shades of red; orange; pink; many ringed and tipped with a deeper color. Do best in a shady location and in moderately rich soil. Fine for cutting. Not reliably hardy north of Washington, D. C., except in warm, sheltered locations. Splendid for growing in frames or pots. Set roots, claws downward, 2 in. deep, 4 to 6 in. apart. If grown in pots, plant 6 to 8 roots in a 6-in. pot; cover roots with 1 in. of soil, and allow 2 in. of space between them. Ranunculus roots are small and resemble tiny clumps of dahlias.
12 for 85¢; 100 for \$5.75; 250 for \$12.00

In northern states, or in any cold section, we advise waiting until spring to plant Ranunculus and Anemone bulbs outdoors. Both of these classes, however, are suitable for indoor winter culture or growing in frames.

A glorious display of orchid-like, graceful flowers may be had in July if you plant bulbs of these beautiful iris in the fall in well-drained, sandy loam, 3 to 4 in. deep and 6 in. apart. If you live in Florida, any of the Gulf States, Texas or New Mexico, bulbs planted in late fall should produce flowers during the winter months. 18 to 24 in. tall.

and for Growing Indoors

Among the many flowers that can be grown from fall planted bulbs, the hyacinth stands at the top of the list. It is probably the easiest flower to grow in pots or bowls, and what could be more decorative or attractive than a display of hyacinths in the house during the winter or early spring! Equally effective and beautiful are beds, borders or irregular groups here and there among perennials, in combination with pansies, forget-me-nots, English daisies, arabis, aubrietia and hardy alyssum, or in the front of shrubbery. We offer the best varieties in a full range of colors from purest white, creamy yellow, through pinks and blues to deepest indigo.

Mammoth Size Bulbs for Giant Spikes

The spikes produced from Burpee's Mammoth Size Bulbs will be truly giant and well filled with large, showy florets. Our mammoth bulbs are carefully selected, of the highest quality, and particularly desirable for beds, borders, pots or glasses, where the largest flower-spikes are wanted. For forcing, plant only one variety in a pot or pan.

7189 Arentine Arendse Magnificent pure white open bells of extra large size; sturdy spike. Especially fine variety for forcing.

7201 City of Haarlem Large, erect trusses of soft creamy yellow bells of good substance. Splendid for forcing and bedding.

7202 Delft Blue Unusually large, well-filled spikes of a most beautiful blue shade. Prized for all uses; early forcer.

7191 Gertrude Compact trusses of light rosy carmine. Bold, erect grower. Considered the best of its color for all purposes.

7192 Grand Maitre Rich, deep porcelain-blue; the florets are loosely placed in large, noble trusses. A most popular blue shade.

7193 King of the Blues Dark, glistening indigo-blue; very large, compact spikes. Delightful vanilla scent. Highly recommended.

7194 Lady Derby Light rose-pink bells of large size make up into striking and showy trusses. Exceedingly pretty for all uses.

7195 La Victoire Brilliant rosy carmine, little lighter in color when forced. Very large, well filled, compact spike of large bells.

7196 L'Innocence Immense spikes of the purest white, and the earliest white for forcing. Does well in all plantings. Superb.

7197 Myosotis Silvery blue shaded porcelain-blue—a lovely soft forget-me-not blue tone; best of its color. Always admired.

7198 Pink Pearl Broad, strong-stemmed trusses of light rose-pink. An appealing and unusually clear shade. Exquisite for groups.

7199 Queen of the Pinks Bright rose-pink; well-set spike with large bells of a wonderful, clear color. Fine for late forcing.

Narcissus or Daffodils

In a general way, daffodil and narcissus mean the same thing; daffodil is the common name and narcissus the botanical name. Common usage among garden makers in this country has applied the term daffodil to the giant trumpet varieties, while the smaller or medium trumpet, as well as the cluster-flowered and poet's types, are referred to as narcissus. Botanically, these smaller or medium trumpet daffodils are the barri, incomparabilis, leedsii, poeticus, poetaz, polyanthus and miniature types. To avoid confusion, we are listing all of these classes as daffodils. Some gardeners apply the name jonquil to the giant trumpet daffodils, but this is misleading, as the true jonquils and campernelles are small-flowered and sweet-scented; showy when massed in beds, borders or naturalized. Their delicious fragrance makes them indispensable for cutting.

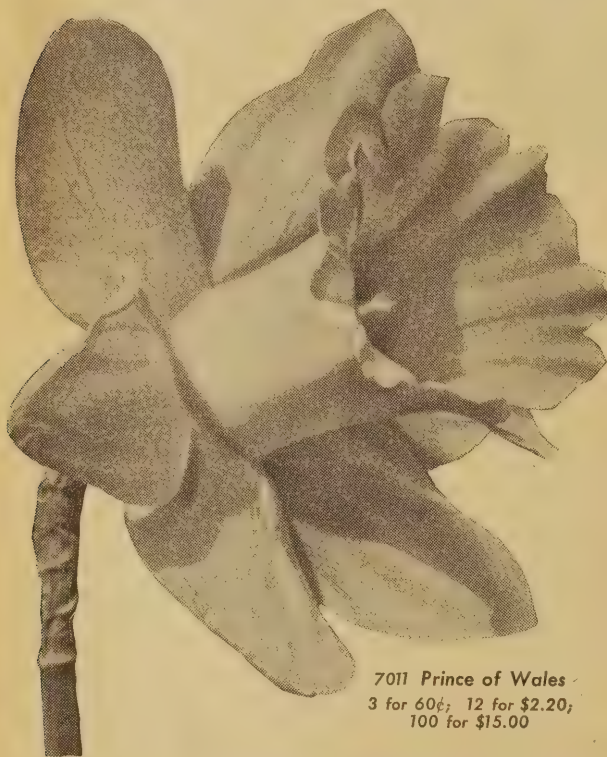

As daffodils bloom early, last a long time, and may be had in so many lovely varied forms, they have few equals as garden flowers. They are most desirable for any garden purpose—in masses, in beds or borders, in groups of twelve or more here and there in the hardy perennial border, or in the foreground of shrubbery. For naturalizing in large quantities, no other flower is more suitable. Ideal, easily grown subjects for winter blooming in the house, especially the paper white grandiflora and soleil d'or narcissus which will be found listed on page 25.

Brief cultural directions for the growing of daffodils indoors and outdoors are given on page 22; full directions are printed on every bag containing the bulbs. Daffodils are easy to grow and require little care.

Giant Yellow Trumpet Daffodils

Flowers of the ever-popular Giant or, perhaps better named, Long Trumpet Daffodils, have trumpets as long as, or longer than, the length of the perianth petals. The flowers are freely borne on strong, stiff stems, 1 ft. and more high. This group includes varieties which have yellow, lemon or sulphur-colored trumpets and perianths of the same shade or lighter, but not white.

In the descriptions we refer to trumpet and perianth—the trumpet is the funnel-like center; the perianth the surrounding row of petals.

Daffodils are unexcelled for naturalizing . . 19

Medium Trumpet Daffodils

On this and the next two pages we offer a choice assortment of daffodils whose trumpets are not so long as the perianth segments. In this group, where the trumpet is greatly reduced in size and cupped, we refer to it as a "cup"; where trumpet is shortened but expanded or broadened, we call it a "crown" and where very small and flattened, an "eye." There are some particularly showy and beautiful daffodils in this group.

The Medium Trumpet class is divided into three groups—Incomparabilis, Barri and Leedsii. These divisions are based mainly on the relation of the perianth to the trumpet, crown or cup; an explanation is given under each group as to its distinguishing characteristics. These types of daffodils are becoming more popular each year.

HOW TO GROW DAFFODILS

Outdoors: For best results plant bulbs as early in the fall as possible, 4 to 8 in. deep and 6 to 10 in. apart; the exact distances depend on the size of the bulb and the nature of the soil. In very cold locations, after the ground is frozen hard, cover with leaves, straw or coarse litter to a depth of 4 to 6 in. to prevent alternate freezings and thawings during the late fall and winter months.

Indoors: Put several bulbs, about 1 in. apart (same variety) in a pot, barely cover the bulbs with soil, water thoroughly and put in coldframe or heel-in in the garden for 8 to 10 weeks to force root development before bringing indoors for winter blooming. Full cultural directions are printed on the bags containing the bulbs.

Polyanthus Narcissus

Popular for growing in the house during the winter and early spring,
either in soil or in pebbles and water

One of the easiest flowers to grow. Best results are obtained if your first plantings are not made until after October 15. To have a continuous display, make successive plantings two or three weeks apart. We suggest you order enough bulbs early, as they will keep in perfect condition if put in a cool, dry place until needed for planting. After flowering, the bulbs should be discarded and new ones purchased next fall. Ours are large, firm bulbs.

Water Culture: Put an inch or two of sand or pebbles in bottom of dish; set the bulbs upright and place sufficient pebbles around them to hold them in place. Fill dish with water and set in a dark, cool room until plenty of roots have formed, after which bring to a light but cool, free from frost, place. Polyanthus Narcissus may also be grown in soil. **They are not suited to garden planting** except in frostless localities.

7187 Paper White Grandiflora

The large, pure white, sweet-scented blooms are borne in clusters and are highly prized for their beauty, fragrance, and the ease with which they can be grown. This accounts for the universal popularity of Polyanthus Narcissus for indoor decoration during the winter.

Burpee's Hardy Garden Lilies

Easy to grow in any good, well-drained garden loam to which has been added a generous quantity of leaf mold. Once established, they will increase in beauty each year. Most all lilies delight in a sunny location, but it is advisable to mulch so that the hot sun does not reach the soil around the base of the plant. All varieties offered are highly decorative in the border, while the dwarfier ones also give a charming touch of beauty to the rock garden. Lily bulbs differ greatly in size according to variety, some 1 in. across, others 3 in. or more; we supply the sizes which will give the best results. We do not recommend hardy lily bulbs for house culture; for this purpose, plant the Easter Lilies offered on page 31 which also may be grown outdoors in sections where winters are mild.

CANDIDUM—(Madonna or St. Joseph's Lily)

Waxy white, sweet-scented, broadly funnel-shaped flowers with yellow anthers are freely produced during June and early July atop strong stems 2 to 4 ft. tall. Individual flowers measure 3 to 4 in. long and fully as wide. In addition to being known as Madonna or St. Joseph's Lily, it is also known as Annunciation, Lent or Bourbon Lily. Very popular; easily grown. Likes full sun but will endure light shade. Candidum lilies usually produce top growth before cold weather sets in. This growth need not be protected during the winter except in very cold localities. Do not use any heavy material that will pack down and smother the plant. Loose straw placed around the plant is the most desirable.

7243 EXTRA LARGE BULBS These bulbs will produce taller plants, larger blooms, and more of them to a stem than the large bulbs.

50¢ each; 3 for \$1.35; 6 for \$2.60; 12 for \$5.00; 25 for \$8.75

Delivery of Hardy Garden Lily Bulbs

Hardy Garden Lilies are sent you in the fall just as soon as the bulbs are thoroughly cured and in the proper condition for planting. Some varieties will not be ready until November or early December. Plant them in the garden as soon as possible after they are received. If you live in a locality where the soil freezes early, we suggest that you cover the ground with manure, leaves, straw, etc., to prevent it from freezing. When lily bulbs arrive, remove covering and plant them immediately. Do not put the covering back over the bulbs until after the ground has frozen hard. The purpose of the covering is to keep the ground frozen so that alternate freezings and thawings will not injure root growth during the winter. Remove covering in spring after danger of frost has passed.

Snow Crocus—Earliest of All

These species crocus are the first to flower in the spring; they bloom ahead of all other varieties—very often as early as February—and continue for a long time. Wonderful for naturalizing.

7611 Snow Crocus, *Susianus* 12 for 75¢; 100 for \$5.50

Bloom in early March and will grow in many places—in the lawn, flower borders, rock gardens, edge of shrubs, on the slopes of terraces, in sun or shade, and even under trees. For showy effect, plant bulbs 3 to 4 in. apart, 2 in. deep. To avoid formal arrangements when planting in the lawn, scatter the bulbs and plant them where they fall. In borders, double rows 6 in. apart with the bulbs spaced 3 in. apart in each row are very showy; such ribbon arrangements are most striking. Well-drained, fairly rich soil will give the best results.

Indoors: Plant 8 to 10 bulbs 1 in. deep, 2 in. apart, in a 6-in. container using light sandy soil to which bone meal has been added; water well and set in a cool cellar for about 6 weeks so that bulbs will become well rooted. When top growth has begun, bring them to the light. Keep in a cool location and gradually bring to a sunny position where it is not too hot. They will not stand forcing or too much heat. Usually bloom in six to seven weeks after they are well rooted. Make several plantings for a longer blooming period and please remember to grow as cool as possible in an airy location.
